ABOUT ME:

I am a dynamic tech professional, deeply immersed in the world of coding and gaming. My journey is marked by a constant pursuit of knowledge and skill enhancement in software development. As a contributor to a tech blog, I translate complex technical ideas into accessible insights, reflecting my commitment to the tech community. I thrive in environments that challenge me to grow and innovate, always wishful to embrace the next technological advancement.

WORK EXPERIENCE

Hashi (Mar 23 / Currently)

In my role at Hashi, a startup that specializes in B2B online education, I have played a key role in streamlining complex projects. A major accomplishment of mine is leading the development of a React Native npm library, ensuring it's compatible with both Expo and RN bundlers. Additionally, as a Full Stack Javascript Dev, I move across all company projects, collaborating closely with the entire team.

Devink (Aug 23 / Currently)

As the CTO of Devink, a developer-centric startup, I play a multifaceted role in driving our technological vision. We engage in diverse projects, from client-driven solutions to developing our own SaaS products. Beyond guiding project management and tech strategy, I'm deeply involved in mentoring our team.

Bookster (Sept 23 / Nov 23)

As a freelancer at Bookster, an app for book enthusiasts on Play Store and App Store, I led the integration of Amplitude in React Native. This role offered me the chance to enhance a widely-used app, combining my technical skills with a challenge to understand the behavior of the users inside the app.

Jethi Tech Software (Oct 22 / Mar 23)

I've done an internship as a part of the development team of an international digital marketing company. Our team worked in collaboration with successful startups to help them achieve their digital growth goals.
In my role as a Frontend React Developer, I engaged with various UI libraries, enhancing user interfaces with modern and responsive designs.
